Microtunneling Mixed Cutting Wheel for Herrenknecht AVN1000 Machine.

We have available for sale or rent a mixed cutting wheel for the AVN1000 Herrenknecht Microtunneling machine.

This type of cutting head is for application in cohesive and non-cohesive unconsolidated ground such as clay, silt, sand or gravel, in ground with harder layers and erratic blocks and in consolidated ground material, ground with stones and boulders and rock.

The mixed cutting wheel can be used in soil condition up to about UCS 80 Mpa

In geology UCS stands for Unconfined Compressive Strength which is often used as a first guide to determine the type of cutting wheel needed.

Additional and more detailed soil analyses will be required for making the final decision.

If we do not have the required cutting wheel available, we can always offer a new build cutting wheel.

For Sale & For Rent
